WHY DO YOU CLIMB?

There's solitude being 500 feet in the air, seeing views that only a handful of people will ever see in person. Everything just stops. There's no other job like it. Being on the tower is the best office in the world.

FULL BODY HARNESS 101

DONNING THE HARNESS

1

UNTANGLE AND VISUALLY CHECK HARNESS

Grab the harness by the dorsal D-ring and follow the chest strap to untangle. Closely look over the harness webbing for abrasion, the hardware for excessive wear, and the impact indicators to ensure it hasn't been in a fall.

2

DON THE HARNESS

Put your arms through the shoulder straps, like a jacket. Don't secure the chest strap yet.

3

ADJUST FROM THE BOTTOM UP

The sub pelvic strap should rest just below your buttocks. Raise or lower this using torso adjusters, usually above the waist belt.

4

CONNECT & ADJUST LEG STRAPS

These should be snug, but not overly tight. You should be able to slide 2 or 3 fingers between your leg and the strap.

5

CONNECT & ADJUST CHEST STRAP & WAIST BELT

Waist belt should be snug, but not too tight or too loose. The chest strap should rest directly across your chest cavity. Not too high, not too low, but right in the sweet spot to keep you safe.

TYPES OF CONNECTORS

TONGUE BUCKLES

Easy operation, cannot slip once in position.

QUICK-CONNECT

Easiest operation, but can occasionally require readjustment.

PASS-THRU/MATING

Cheapest options, hardest to use and adjust properly.

INSPECTING THE HARNESS

Visually inspect these key areas of the harness every time, prior to beginning work. If you find any of these problems, take the harness out of service.

WEBBING

Cuts, tears, excess abrasion, holes, discoloration, UV damage, heat damage, welding slag, chemical damage, hard spots

STITCHING

Damaged stitching, broken thread, pulls and loose stitches, missing sections

D-RINGS, HARDWARE, & BUCKLES

Deformity, corrosion and rust, major nicks and dings, excess wear, proper operation

IMPACT INDICATORS

Deployed impact indicators, broken D-ring plates, deformed grommets

LABELS

Manufacturer, date of manufacture, inspection log, model, series, warnings

DORSAL CONNECTION

This D-Ring is found on all ANSI harnesses. It's used for fall arrest and should be placed directly between the shoulder blades.

CHEST STRAP

Tower harnesses have another D-Ring here. It's the only other connection point which can be used for fall arrest, like on a cable climb system. Unlike the Dorsal D, fall distance must be limited to 2 feet or less.

WORK POSITIONING

Side D-rings are used for work positioning. Never fall arrest.

SEAT SLING

A seat is a common feature on tower harnesses, and if you're working in suspension, you'll be glad you have one. Look for features like additional tool loops or aluminum reinforcement. D-Rings can be connected using...

ABCs OF FALL PROTECTION

A typical fall arrest system has three main components, often described as the ABC's of fall protection. **Anchorage. Body Support. Connectors.**

When used properly together, they provide the maximum degree of safety for a worker at height. But don't forget, a rescue plan is an equally important factor when it comes to fall protection. The proper gear for descent and rescue should always be a part of a complete fall protection plan, too.

B

BODY SUPPORT

Now we're talking harnesses. There's no safe and natural way to attach one's body to a structure. Luckily, harnesses are designed to distribute the forces that occur in a fall to limit injuries, or worse, death. There are many varieties of harnesses available for different industries and jobs. Find the correct one for your application starting on page 8.

ANCHORAGE

Anchors provide secure attachment points for workers. There are many different ways to properly anchor depending on the industry, job, and structure. If you're on a tower, an anchorage point could be a tie-off sling, or perhaps an I-Beam anchor could be used in a horizontal system. Look for anchorage points rated for at least 5,000 pounds, or perhaps an engineered solution designed for your specific application. See the variety of anchorage options starting on page 46.

CONNECTORS

Once you've chosen a comfortable harness and your anchor point is secure, you just need one last thing before you're ready to climb. Here's where a shock absorbing lanyard or SRL comes in. Twin-leg lanyards provide 100% tie-off. SRL's can limit your fall distance to a few inches. Again, there are a variety of connectors to choose from, made by many different manufacturers. See them all beginning on page 30.

DESCENT & RESCUE

What's your plan? Every job site needs to have proper rescue equipment and a proper rescue plan in place before anyone starts working. From rope access to confined space, there is specific gear needed to get to a fallen worker and get them to safety. A haul system helps raise them up, and a descent device will lower them down. Or maybe you could add trauma straps to your harness, so if you're the one dangling you can relieve some of the pressure that gravity is placing on your parts. Lucky for you, we've put together some rescue kits that can get you started on your rescue solution. Take a look at pages 74-76.

FALL PROTECTION ESSENTIALS

Eagle Tower LX Tower Climbing Harness

Elk River has been an innovator of tower products for many years. The Eagle Tower features an extremely lightweight design with buckles that are easy to adjust. It has been updated with an oversized back pad and pull-down adjusters on the shoulder straps for more convenience and comfort. It offers all the features of a more expensive harness at an affordable price.

Flex-NoPac Shock Absorbing Lanyard

This twin leg lanyard features 6' legs with a 2-1/4" double-locking rebar hook at each end and a 3/4" centurion auto-lock snaphook in the middle. This lanyard is one of the most popular lanyards in the industry.

WHAT IS A SELF-RETRACTING LIFELINE?

A Self-Retracting Lifeline, or SRL, is a device that contains a spring loaded retracting web or cable lanyard wound around an internal drum. It automatically locks and arrests the fall of a worker.

CLASS A vs CLASS B

ANSI Z359.14-2012 classifies Self-Retracting Lifelines and Personal Fall Limiters into two classes. The main differentiators between the two are stopping distance and arresting forces.

Class A

- Maximum arresting distance not to exceed 24".
- Average arresting force not to exceed 1,350 pounds or 6kN or have a maximum peak of 1,800 pounds or 8 kN.
- After environmental conditioning (hot, cold, wet), average arresting force not to exceed 1,575 pounds or 7 kN or a maximum peak of 1,800 pounds or 8 kN.

Class B

- Maximum arresting distance not to exceed 54".
- Average arresting force not to exceed 900 pounds or 4kN or have a maximum peak of 1,800 pounds or 8 kN.
- After environmental conditioning (hot, cold, wet), average arresting force not to exceed 1,125 pounds or 5 kN or a maximum peak of 1,800 pounds or 8 kN.

THREE TYPES OF SRLS

SRL – Standard Self-Retracting Lifelines that is mounted or anchored to limit free fall.

SRL-LE – Self-Retracting Lifelines for use in leading edge situations, or where the device is not necessarily mounted overhead.

SRL-R – Self-Retracting Lifelines with an integral means for assisted rescue by raising or lowering the subject.

SWING FALL

SRLs are great because they allow you to work much farther away from an anchorage point, sometimes over 100 ft. The downside to this is swing falls become much more of a danger.

A swing fall occurs when an anchorage point is not directly overhead of a worker. The device will stop them in the required distance, but the worker may still swing a great distance. This potentially puts other obstacles, walls, or objects in the path for the worker to collide with.

To avoid swing falls, always stay in the safe zone, which is within 30 degrees of your anchor point. Swing falls can be avoided by using mobile anchorage points which will travel with the worker.

BODY WORN vs MOUNTED

Larger SRLs are mounted above the worker, and the lanyard runs down to connect to the user's dorsal D-ring on their harness. These come in lengths ranging from 8ft to over 100 ft. The other option is body worn. These are compact devices which connect directly to the users harness and are much shorter, generally 6 or 8 ft. To tie-off the user

connects the tether to an anchorage point. These can also be had in twin-leg configuration for 100% tie-off.

LEADING EDGE + FOOT LEVEL

Most SRLs are designed only to be mounted above the user. For cases where this is not possible, specially designed Foot Level or Leading Edge SRLs are required. ANSI classifies these as SRL-LE devices. These incorporate factors to absorb the extra energy associated with foot-level tie off, as well as more robust cables to resist breaking when run against a leading edge.

SHOCK PACK vs INTERNAL BRAKING

SRLs generally use two different methods to decelerate a worker in the event of a fall. The first is an external shock pack. Like a standard lanyard, this shock pack is a bundle of webbing that is sewn in a folded pattern and is designed to tear to absorb the energy created from free fall. The second is internal braking. As the SRL quickly unwinds, the centrifugal acceleration causes a mechanism to lock the device.

OTHER VARIATIONS

Other potential options for SRL variations include:

- Twin Leg for 100% tie-off protection.
- Sealed design for harsh work environments with grease, dust, and moisture.
- Rescue Devices, referred to as SRL-R by ANSI, for auto retrieval. These are common on confined space systems.
- Tie-Back for when connectors cannot secure to anchorage points.
- Arc Flash rated for working in electrical environments.

GUARDIAN DIABLO SRL

The new Diablo Self-Retracting Lifeline offers superior protection and its design makes it supremely lightweight and durable. It is available with steel or aluminum snaphooks or rebar hooks and can be purchased on its own or in a kit of two, which allows it to transform into a double unit. When the job requires a highly mobile and sturdy SRL, the Diablo is the perfect choice. The Diablo Single SRL includes a carabiner and the Diablo Double SRL Kit includes a carabiner and connector bracket. When used in combination with proper PPE (i.e. harness and anchor), the Diablo SRL has a capacity range up to 420 lbs, ANSI compliant.

This stamp clearly identifies the standard which the hardware is manufactured to follow. Typically ANSI Z359.1-2007 or Z359.12, although there may also be CSA or EN ratings stamped, as well.

LOAD RATING

A load rating should be stamped on the long axis of the hardware. This shows what the minimum break strength of the hardware is, typically displayed in pounds, tons, or kN.

MANUFACTURER MARKINGS

ID's who made the hardware, lot #'s and other codes to help identify when, where, and who made the thing. These aren't as much as a safety feature, as they are for troubleshooting if there's ever a bad batch from the manufacturer.

GATE RATINGS

Stamped on the gate itself, usually as 3,600 lbs, 16kN or 3.6m. If your hardware is missing this stamp, there's a good chance you're not in compliance. Don't continue work with this gear!

WARNINGS

Many manufacturers put reminders or warnings to help the user stay safe. Some examples include: a note to double check the gate is closed properly, red warning paint, or even a skull and cross bones logo for open gates.

GEOMETRY

During normal work, connectors move around on anchorage points. If your hardware isn't designed to be used with your anchorage point, or doesn't have proper safety features, the gate could make contact with the anchorage point and potentially work its way open. Be sure your connector and anchorage point are compatible. This risk is magnified when the connection is at foot level.

TENSION DIRECTION

Snaphooks and carabiners are designed to be loaded on their long axis. Loading them incorrectly may lead to failure. Always be sure your hardware is being loaded in the proper direction. If you're at risk of cross loading, or applying tension on the short axis, don't continue working.

ONE AT A TIME

Connectors are designed to go solo. Attaching two snaphooks or carabiners to a single D-ring may cause problems. They can act on each other causing one to slip open, or get twisted up, causing damage. Remember, one per anchorage point!

LOAD RATING

Hardware made for lifting and rigging will have a Working Load Limit, often abbreviated as WLL on the hardware, stamped in the metal. This means the hardware has been tested to be able to maintain a static load up to that rating. This rating can be listed in lbs, tons, or even kN. Don't use carabiners designed for fall protection for lifting and rigging!

ANSI

ANSI Z359 compliant connectors are almost universally recommended. Hardware that has this standard will have gates rated to 3,600 lbs. This helps ensure the gate will not fail if loading occurs. Multi-action gates are also required. To open, there must be at least two separate actions made to release the mechanism. Look for the ANSI stamp before using the gear.

ANSI Z359.12 - 2009 Connecting Components for Personal Fall Arrest Systems
Snaphooks and carabiners shall be self-closing and self-locking and shall be capable of being opened only by at least two consecutive deliberate actions. They shall be capable of withstanding a 5,000 lbs. (22.2kN) tensile load. The gate shall be capable of withstanding a minimum load of 3,600 lbs (16kN) without the gate separating. All markings shall be in English, and be legible for the life of the component. Connectors shall be marked to identify: manufacturer, year of manufacture, load rating for major axis (minimum of 22 kN or 5,000 lbs), load rating for gate marked on gate mechanism, for connectors that are non-integral part (non-captive eye), then "ANSI Z359.12" is required.

OSHA 1910.66 & 1926.592 - Regulations for Carabiners and Snaphooks
Connectors shall be drop forged, pressed or formed steel, or made of equivalent materials. They shall have a corrosion-resistant finish, with smooth surfaces and edges to prevent damage to interfacing parts of the system. Snaphooks shall be sized to be compatible with the member to which they are connected so as to prevent unintentional disengagement, or shall be a locking type snaphook designed and used to prevent disengagement. Snaphooks, unless of a locking type designed and used to prevent disengagement from the following connections, shall not be engaged: directly to webbing, rope or wire rope; to each other; to a D-ring to which another snaphook or other connector is attached; to a horizontal lifeline; or to any other object which is incompatibly shaped or dimensioned in relation to the snaphook such that the connected object could depress the snaphook keeper a sufficient amount to release itself.

INSPECTING CONNECTORS

GATE FUNCTION

Check the gate for smooth operation. It should open smoothly. When released, it should close and lock properly. When closed, move gate back and forth to see if there is excess movement. If it catches, grinds, doesn't close properly, or is difficult to operate, remove the unit from service.

DEFORMITY

Check the axis of the unit for signs of overloading or deformity. Any stretching, or stress marks warrant removal from service.

RUST/CORROSION

Look over the unit for any signs of corrosion or rust. ANSI Z359 connectors use a zinc coating for protection that wears off during normal use. Once the zinc begins to show signs of pitting or corrosion remove from service.

MARKINGS

If any of the ratings normally stamped on the hardware are worn off, the unit must be retired.

PHYSICAL DAMAGE

Inspect for any significant dents, nicks, cuts or gouges to the carabiner or snaphook. These can be indications of improper use.

THE MANY SHAPES, FUNCTIONS, AND DESIGNS OF CONNECTORS

There are many designs of connectors. From all the different shapes and materials of carabiners, to snaphooks and rebar hooks. Some have swivels, some have double and even triple action locking mechanisms. Made from steel, aluminum, or other alloys, they can be designed for fall protection, lifting and rigging, or maybe just to quickly connect two objects and not made for safety at all. Be sure you have the proper piece of hardware for the job at hand... if you're not sure, give GME Supply a call and we'll make sure you're in the clear!

ROPE 101

ROPE CONSTRUCTION

3-Strand - 3-Strand ropes are an inexpensive rope option. They tend to have a lower breaking strength than double braid or kernmantle, so a larger diameter must be used to achieve the same strength. Due to their construction, 3-Strand ropes have a tendency to rotate under load and provide less abrasion resistance. These characteristics make it a poor load line. With regard to safety and working at height, 3-Strand is most commonly used as a lifeline due to compliance with OSHA requirements and compatibility with 5/8" rope grabs.

Double Braid - Double braided rope is, as the name implies, a braided core surrounded by a braided sheath. The inner and outer braids are generally designed to share the load equally. Double braid rope remains round under tension, imparts no rotational force when loaded and has a soft hand. These characteristics make it ideal for use as a load rope.

Kernmantle - Kernmantle rope consists of twisted parallel fibers (the kern) surrounded by a tightly braided sheath (the mantle). Different from a double braid, only the sheath of a kernmantle is braided. The core fibers provide the majority (about 70%) of the rope's

strength. The sheath is more tightly braided than in a double braid, lending significantly higher abrasion resistance. The construction of the mantle including tightness, fiber denier, and number of carriers, determines the handling properties of the rope. There are two distinct types of kernmantle: dynamic and static. Dynamic is used for recreational climbing due to its high shock absorption capabilities. Static kernmantle has very low stretch and works well for industrial applications. Due to its construction, it remains round through descent devices and allows minimal twist on the rope. The properties of static kernmantle make it ideal for use as a life line or descent line.

Single Braid - Also called hollow braid, single braid ropes consist of an even number of strands, most commonly 12, braided to leave a hollow core. Due to the hollow core, single braid is generally not perfectly round and will flatten under load.

ROPE FIBERS

Nylon - Nylon is a synthetic fiber often found in ropes and safety equipment. It has a high strength-to-weight ratio and is highly UV, abrasion, and chemical resistant. Nylon is slightly stronger and tends to have more stretch than polyester. Nylon absorbs water and loses some of its strength when wet, but regains this strength when dry.

Polyester - Polyester is a synthetic fiber used for rope and safety equipment. It is almost as strong as nylon, but has significantly less stretch. Polyester does not absorb water and its strength remains unaffected when wet. Compared to nylon, polyester has higher resistance to UV, abrasion and chemicals.

Polypropylene - Polypropylene is a synthetic fiber similar to nylon and polyester. Of the synthetic fibers, polypropylene is the least expensive. It is lightweight, strong for its weight, and, most significantly, it floats on water. Polypropylene has very low resistance to UV and abrasion.

HMPE - Dyneema and Spectra are two of the more common brand named HMPE fibers. These fibers are the same strength as the equivalent size steel cable at a fraction of the weight. HMPE has very tough fibers lending incredibly high abrasion resistance. These same fibers make HMPE highly susceptible to extreme weakening if knotted or exposed to sharp angles. The fibers are very smooth yielding a very low friction coefficient, making this rope hard to knot. It has a low specific gravity, allowing it to float on water and is very resistant to moisture, water, most chemicals and UV.

UNICORE TECHNOLOGY

Unicore Technology creates the ultimate bond between sheath and core. This bond ensures sheath slippage is nearly zero, even when the sheath is entirely cut circumferentially.

PMI EXTREME PRO

An incredible new PMI rope, Extreme Pro with Unicore technology is the ultimate 11mm polyester kernmantle rope. Unicore technology creates the ultimate bond between sheath and core that ensures sheath slippage is nearly zero, even when entirely cut circumferentially. If the sheath is cut, it will not slip down and bunch below the damaged area. See the illustration above.

Key Features: Unicore technology • Nearly zero sheath slippage • 100% Polyester Sheath • 100% Nylon 6.6 Core • Sheath cannot bunch

STERLING HTP STATIC

Sterling HTP static ropes have proven to be the most durable and best performing static ropes available. The benefits of using HTP include having a rope with better overall durability, higher strength, and extremely low stretch. With less stretch, the HTP is highly efficient rope for haul systems, rope bridges, and industrial rope access work. Sterling HTP ropes do not lose strength in wet conditions. Certified to NFPA 1983, 2012 edition.

Key Features: 100% polyester static • Significantly lower elongation is perfect for any haul system

PELICAN STATIC MASTER

The first choice for strenuous use by arborists, fire and rescue professionals. Pelican's block creel static kernmantle construction features a tough chemical-resistant polyester cover over a nylon core, providing maximum energy absorption. Steam setting helps to eliminate cover over core slippage. The rope is firm yet flexible enough to be tied or passed over a pulley sheave. These ropes are resistant to most chemicals and have excellent retention in extreme conditions. U.L. Certified to NFPA 1983-2006 edition standards.

STERLING SUPER STATIC

SuperStatic2 ropes are 100% nylon and excel in many applications, including rope access, technical rescue, rigging, and tactical operations. They are designed with a high denier and a tight, durable sheath to reduce stiffness; work well through gear, and provide smooth rappels. Sterling's Better Braid Technology matches their unique thermodynamic yarn balancing and twist in the core to proper twist and braid construction in the sheath to create a strong, resilient rope with a perfect balance of strength, proper elongation and exceptional handling. These ropes are easy to knot, will stay round, and have optimal elongation when loaded. Engineered and certified to the highest standards, Sterling's SuperStatic2 ropes have been field tested, used and proven by the top instructors, rescue personnel, and rope technicians worldwide.

Key Features: 100% nylon low stretch • 41/59 sheath/core ratio yields best durability and great handling

NEW ENGLAND KM III

An exceptional static rope for rappelling, caving, rescue, top roping, fixed rope applications, hauling, and life safety applications. The unique polyester sheath differentiates KM III from other static ropes. The polyester sheath is balanced with a nylon core to limit rotation, bouncing, and stretch. KM III is NFPA and CE approved, and all come with an NFPA certification tag and CE labels. Thirty-two bobbins provide the correct sheath for the unique demands of static rope and the optimum sheath/core ratio. This allows for an incredibly smooth sheath, higher tensile strengths, and superior handling characteristics.

Key Features: NFPA Certified • 32-carrier construction • Polyester over Nylon construction • Balanced, Torque Free Construction

PMI CLASSIC PRO

PMI's Classic EZ-Bend 16-carrier construction combined with the toughest nylon on the market makes PMI ropes some of the toughest in the world. PMI Classic 16-carrier ropes will always beat 32, 40, and 48-carrier designs made with lesser quality nylons hands down in abrasion and real-world durability tests. Although all diameters of PMI Classic rope are 16-carrier sheath design, the denier (thickness) of each diameter's sheath is different. It is carefully designed to provide the maximum abrasion resistance, "grab" the core to minimize sheath slippage, and provide the desired hand for the intended applications.

Key Features: NFPA Certified • 16-carrier construction • CI1801 • Third party certified by UL (Underwriters Laboratories) • CE • Torsionally balanced, continuous filament nylon

PELICAN DYNEEMA TOW AND WINCH LINE

This high performance rope features superior strength, low weight, and specific gravity. Unaffected by oil and common chemicals, this high strength rope is easily spliced, exhibits low flex fatigue, near zero creep, excellent abrasion resistance with a low elongation-to-break ratio. Load-sharing and staggering failure built in can eliminate dangerous backlash. The fiber grades used in this rope are SK60, SK65, SK75 and SK78. Dyneema is, pound for pound, 10 times stronger than steel and 33% lighter than Nylon with over 3 times the strength of Polyester or Nylon. Additional protection is provided by urethane coating. Eyes are professionally hand-spliced along with polyester chafe guards. Break strength remains constant in wet or dry conditions, making this the perfect choice for heavy duty winch line, mooring and towing lines, offshore positioning ropes, yachting lines, and commercial fishing ropes. With a specific gravity of 0.98, this rope floats!

Key Features: Low flex fatigue • Near zero creep • High UV resistance • Floats on water • Eliminates backlash • 6% elongation at break • Excellent abrasion resistance • 3x stronger than polyester or nylon

STERLING TECH 11

Designed with rigors of tree work in mind, the Tech11 is an 11mm rope constructed with an aramid sheath and nylon core. When used as a flip-line, it offers great abrasion resistance, incredible durability and security. This rope has been in development and field tested for several years. It has been exposed to some of the roughest conditions by rope access, fire rescue and arboriculture professions.

STERLING 1" TYPE 9800 FLAT WEBBING

Type 9800 webbing is a flat, woven nylon webbing that is abrasion resistant and offers a high tensile strength. The increased strength is often preferred in harsh or abrasive environments for anchor building, hauling or making harnesses. Because Type 9800 is woven solid opposed to a tubular webbing, it can be more difficult to handle.

PROTECTA COBRA ROPE GRAB

Constructed of high impact resistant steel, 1.75 lbs total weight, operates in automatic or manual mode, accommodates 5/8" rope, can be removed and reattached to rope at any point during traverse, designed for use with nylon or polyester rope.

AC202D - \$93.99

WESTFALL PRO DELUXE ROPE GRAB WITH LANYARD

5/8" deluxe self-tracking/park rope grab, 2' shock absorbing lanyard, self-tracking design provides ease of vertical movement, hinged body allows simple placement at any point along rope, locks onto the rope lifeline at the onset of a fall event.

60612 - \$199.99

FALLTECH ROPE GRAB WITH LANYARD

5/8" hinged self-tracking rope grab, 3' shock absorbing lanyard, self-tracking design provides ease of vertical movement, hinged body allows simple placement at any point along rope, locks onto the rope lifeline at the onset of a fall event.

8358 - \$94.99

GUARDIAN ROPE GRAB WITH LANYARD

Removable rope grab; easy to install; fits 5/8" or 1/2" thick safety ropes; locks automatically when a fall occurs; includes attached 3' shock absorbing lanyard; made of galvanized steel; minimum breaking strength 5,000 lbs.

01503 - \$94.99

PETZL ABSORBICA

Tear-webbing energy absorber, for use in combination with a JANE lanyard to make an energy-absorbing lanyard; maximum length of two meters; ends equipped with STRING to hold the connector in position and protect the sling from abrasion; compact and lightweight.

L57 - \$58.95

PETZL ASAP MOBILE FALL ARRESTER

Arrests falls, slides, and uncontrolled descents; works on vertical or angled rope, locks on the rope even if grabbed during the fall, moves up or down the rope without any manual manipulation of the device, easy to install and remove at any point on the rope, may be combined with an ASAP'SORBER energy absorbing lanyard to work at a distance from the rope, comes with an OK TRIACT-LOCK automatic locking carabiner.

B71AAA - \$230.00

PETZL ASAP'SORBER LANYARD WITH ENERGY ABSORBER

Connects the ASAP or ASAP LOCK mobile fall arrester to the harness, allows the user to distance himself from the rope in order to declutter the work area and protect the rope from sharp tools and molten metal splash, absorbs the energy of a fall by the tearing of specific stitching, available in (2) lengths for a choice of the best balance between distance from the rope and reducing the fall length.

L71AA 20 20 cm - \$40.95

L71 AA 40 40 cm - \$50.95

PETZL ASAP LOCK MOBILE FALL ARRESTER

Integrated locking function allows the user to immobilize the device to reduce the length of a fall. In case of a strong wind, this function also prevents the rope from being blown upward. Arrests falls, slides, and uncontrolled descents; works on vertical or angled rope, locks on the rope even if grabbed during the fall, moves up or down the rope without any manual manipulation, easy to install and remove at any point on the rope, connection arm makes the system loss-resistant when passing intermediate anchors, is used with an ASAP'SORBER energy absorbing lanyard to work at a distance.

B71ALU - \$265.00

KONG BACK-UP MOBILE FALL ARRESTER

Supports fall factor 2 falls in a semi-dynamic way, without damage to the safety rope; works on vertical or angled rope; moves up or down along the rope without manual intervention; easy to install and remove at any point on the rope; for rope access applications unit can be used with tug cord; 10.0 to 12.0 mm semi-static ropes (EN 1891 type A) certified with the device.

802 - \$147.99

DBI SALA ROPE-SAFE MOBILE/STATIC ROPE GRAB WITH ATTACHED EZ-STOP

Easy to use automatic to manual operation switch; integrated tow cord; built-in swivel; swivel cover; built-in anti-panic grip; triple action aluminum carabiner; (2) person rescue load rated up to 440 lbs; for use with 27/64 in. to 1/2 in. (10.5 - 13.0 mm) kernmantle rope; 1' integral energy absorbing lanyard.

PETZL CROLL CHEST ROPE CLAMP

Compact, lightweight chest rope clamp; used with the ASCENSION handled rope clamp for ascending a rope, toothed cam with self-cleaning slot optimizes performance under any conditions; stainless steel cam has better resistance to corrosion, catch is opened by pinching for easy manipulation; reinforced rope channel with stainless steel for greater durability for use with ropes 8mm-11mm in diameter.

B16BAA - \$69.95

PETZL RESCUCENDER CAM-LOADED ROPE CLAMP

Simple to use and ergonomic, the rescucender is an openable cam-loaded rope clamp designed for use in haul systems as a tractor or progress capture device; for single ropes between 9mm and 13mm in diameter.

B50A - \$73.95

PETZL ASCENSION HANDHELD ROPE CLAMP

Designed for ascending and occasionally for hauling (progress capture); wide, ergonomic molded handle allows a comfortable yet powerful grip; lower holes for connecting a SPELEGYCA lanyard and installing a FOOTAPE foot loop with a quick link, toothed cam with self-cleaning slot optimizes performance under any conditions, upper hole through which a carabiner attaches the device to the rope, for single ropes between 8mm and 13mm in diameter.

KONG DUCK ROPE CLAMP

Duck, the innovative emergency rope clamp. Conceived for single ropes with a diameter between 8 and 13 mm, Duck is the first and only belay device that works also on plane and tubular slings from 10 to 15 mm width (even if these are not certified for progression). Due to the small dimensions, it can be easily inserted even with one only hand. The big hole allows the rotation of sleeve connectors. Use the Duck as an emergency rope clamp during self belay, retrievals, progression maneuvers and regulating daisy chains.

888 - \$84.99

PETZL FOOTAPE ADJUSTABLE FOOT SLING

Attaches to the ASCENSION handheld ascender for rope ascents, underfoot strap is abrasion-resistant and is slightly rigid to make it easier to step into, adjustable elastic keeps the foot in the foot loop with any type of shoe, mini DoubleBack buckle easily and quickly adjusts length of foot loop.

C47A - \$33.95

KONG LIFT RIGHT HANDED ASCENDER

Excellent ability to block out particularly on muddy and icy ropes thanks to the holes on the cam and on the side plate. The new material and a special chemical and thermal process give to the cam a much higher surface hardness. The result is a great wear resistance and a reduction of the fragility that usually penalizes steels by quenching to low temperatures. New opening lever, ergonomic, easy to handle and protected from shocks and from the risk of accidental opening. For ropes 8mm-13mm.

896R04D00KK - \$69.95

896B04S00KK Left handed - \$69.95

ISC PROFESSIONAL RIGHT HAND ASCENDER

Coned Cam-face to minimise rope wear, and manufactured from solid aluminium with anodized finish for maximum durability. For ropes 9mm-13mm.

RP220A - \$80.00

DBI SALA NOWORRIES DESCENDER

Incorporates the functionality of a stop descender, chest ascender, and belay device in one compact unit, allows user to hard lock, for rope 10.5mm-12mm in diameter.

8700387 - \$247.49

DBI SALA NOWORRIES DESCENDER

Incorporates the functionality of a stop descender, chest ascender, and belay device in one compact unit, allows user to hard lock, for rope 12.5mm-13.5mm in diameter.

8700388 - \$294.99

PETZL SMALL I'D DESCENDER

Large handle is rotated in various orientations to control whether the unit is in descent, stopped, or complete lock-off. For rope between 10mm-11.5mm in diameter.

D200S0 - \$255.00

PETZL LARGE I'D DESCENDER

Large handle is rotated in various orientations to control whether the unit is in descent, stopped, or complete lock-off. For rope between 11.5mm-13mm in diameter.

D200L0 - \$255.00

ISC D5 WORK RESCUE DESCENDER

Unique innovative cam action for precise control; auto lock function when aluminum handle is released; 500 lbs working load limit; for rope between 12.5mm-13mm.

D5 - \$249.99

ISC D4 WORK RESCUE DESCENDER

Unique innovative cam action for precise control; 500 lbs working load limit, aluminum handle, for rope between 10.5mm-11.5mm.

D4 - \$249.99

ROCK EXOTICA UNICENDER

This revolutionary device combines ascending and descending in one piece of gear, works with both single and double rope technique, with seamless transition between ascending and descending, for ropes 11mm-13mm.

RG50 - \$309.00

DBI SALA FISK DESCENDER

Descent control system designed for durability, thermal capacity and smooth flow, allows the operator to tie off and position themselves at a specific work level, comes with instructional DVD.

2103189 - \$240.99

ROCK EXOTICA OMNI-BLOCK SWIVEL PULLEY

The Omni 2.6" brings heavy duty rigging to the Omni family with an MBS of 80kN and WLL of 20kN. In addition to the large 2.6" sheave, the P55 features a prusik minding sideplate, and push-button access to install rope. For material handling see pg 80.

P55 - \$155.00

ROCK EXOTICA OMNI-BLOCK 2.0 SWIVEL PULLEY

Can replace a conventional pulley, carabiner, and swivel and is lighter, less expensive and saves valuable vertical space, allows installing/removing the rope while the pulley is still anchored, sheave diameter 2".

P53 - \$108.10

P53-B Black - \$111.00

ROCK EXOTICA OMNI-BLOCK 1.5 SWIVEL PULLEY

Can replace a conventional pulley, carabiner, and swivel and is lighter, less expensive and saves valuable vertical space, allows installing/removing the rope while the pulley is still anchored, sheave diameter 1.5".

P51 - \$81.40

P51-B Black - \$84.00

ROCK EXOTICA OMNI-BLOCK 1.1 SWIVEL PULLEY

Combines pulley with a swivel; replaces conventional pulley, carabiner and swivel; max rope diameter 13mm, 23kN MBS; sheave diameter 1.1".

P54 - \$76.50

ROCK EXOTICA PRUSIK MINDING PULLEY

Milled from solid 7075 aluminum so material can be taken away where it's not needed and left where it is, axle is machined as part of the side plate, compact, stronger and lighter weight than conventional stamped pulleys; sheave diameter 2".

P1 - \$57.70

P1-B Black - \$58.70

PETZL MOBILE PULLEY

Lightweight, compact pulley, designed for hauling systems and deviations, sheave mounted on self-lubricating bushings for efficiency.

P03A - \$24.95

PETZL ROLLCLIP PULLEY CARABINER WITH TRIACT-LOCK

Triact-Locking minimizes friction on the work rope and install redirects; for ropes 7-13mm in diameter and maximum working load of 4 kN.

P74-TL - \$47.95

BLUEWATER ROPES MICRO PULLEY

Lightweight design features a steel axle, anodized aluminum frame and aluminum sheave; for ropes 8-13mm in diameter.

610116 Black - \$12.95

610117 Orange - \$12.95

TRACTEL M PULLEY

Light alloy, swinging side plates for quick and easy installation, for ropes up to 16mm.

K3040102 - \$30.89

SMC CRX PULLEY

Smooth running 1.25" nylon sheave runs on a stainless steel rivet axle and the color-contrasting aluminum side plates rotate for easy rope insertion and removal, compact size, for ropes up to 13mm.

157303 - \$14.95

ROCK EXOTICA OMNI-BLOCK 2.0 DOUBLE SWIVEL PULLEY

Install and remove rope while still connected to the anchor; sideplate locks with two-stage, double-catch safety mechanism; integrated swivel allows pulley to orient while reducing gain; connect, install and remove rope with one hand; CNC machined for optimal weight and strength; sheave diameter 2".

P53D - \$165.00

P53-B Black - \$167.00

ROCK EXOTICA AZTEK PULLEY SET

Engineered from a solid block of aluminum to maintain strength; come together in either a blue/orange set or black set with laser engraved 'A' and 'B' markings; this coding is used to help set them up in the 4:1 configuration when used with Sterling's 6mm ratchets; can accept up to an 8mm rope.

P41SET - \$205.00

P41SET-B Black - \$211.00

ROCK EXOTICA MACHINED MINI 1.1 DOUBLE PULLEY

Recessed axle screw sits flush to pulley sideplates; Machined—not stamped parts, create a stronger pulley; axle is integrated into sideplates, adding additional strength and rigidity to the pulley; machined sideplates allow for a more compact design; sheave diameter 1.1".

P21D - \$87.50

P21D-B Black - \$88.50

ROCK EXOTICA MACHINED RESCUE 1.5 DOUBLE PULLEY

Machined—not stamped parts, create a stronger pulley, increasing its strength-to-weight ratio; axle is integrated into sideplates, adding additional strength and rigidity to the pulley; machined sideplates allow for a more compact design while maintaining the same rope capacity of other pulleys; sheave diameter 1.5".

P22D - \$101.00

ROCK EXOTICA OMNI-BLOCK 1.5 DOUBLE

Can replace a conventional pulley, carabiner, and swivel and is lighter, less expensive and saves valuable vertical space, allows installing/removing the rope while the pulley is still anchored, sheave diameter 1.5".

P51D - \$126.00

P51D-B Black - \$128.70

ROCK EXOTICA PMP 2.0 DOUBLE PRUSIK MINDING PULLEY

Milled from solid 7075 aluminum; sheave diameter 2.0"; max rope 13mm.

P1D - \$113.00

PETZL TWIN PULLEY

High strength, high efficiency double Prusik pulley, special side plates for use with a Prusik friction hitch in progress capture systems.

P65A - \$137.00

PETZL GEMINI PULLEY

Special side plates designed for use with a Prusik friction hitch in progress capture systems, Parallel mounted sheaves and auxiliary attachment point.

P66A - \$99.95

PETZL JAG

Double pulley designed for use with the JAG TRAXION double progress capture pulley to make a 4:1 haul system; sheaves mounted on sealed ball bearings.

P45 - \$89.95

SMC ADV TECH MATE DOUBLE PULLEY

Made from high quality aluminum; anodized to help prevent corrosion; supports rope diameters from 7mm up to 12.5mm.

SM154801N - \$89.95

PETZL KOOTENAY KNOT-PASSING PULLEY

Voluminous rope channel allows the passage of joining knots, large diameter sheave mounted on sealed ball bearings for excellent efficiency, locking pins on the sheave allow use of the pulley as an anchor.

P67 - \$194.00

PETZL PRO TRAXION

Integrated progress capture device can be used as a pulley or rope clamp, lockable moving side plate for easy rope installation; for ropes from 8mm-13mm in diameter.

P51A - \$138.00

PETZL MICRO TRAXION

Ultra-light, ultra-compact progress-capture pulley that is exceptionally efficient (91%) thanks to its sealed ball bearings; can be used as a simple pulley.

P53 - \$110.00

PETZL JAG TRAXION

Double progress capture pulley designed for use with the JAG double pulley to make a 4:1 haul system. Sheaves mounted on sealed ball bearings for excellent efficiency.

P54 - \$135.00

PETZL PRO

High-efficiency loss-proof pulley; openable even when attached to the anchor, designed for maximum simplicity when setting up hauling or load deviation systems.

The Lad-Saf Flexible Cable Ladder Safety System consists of a top and bottom bracket that act as anchors for a steel cable that runs the length of the climbing area. The Lad-Saf X2 sleeve, attached by carabiner to the harness, arrests falls by locking onto the cable. Designed for ease of use, economy and versatility, optional brackets/ designs are available for bolting or welding the system. There is a choice of rung clamp sizes/styles and there are systems for straight ladders and for connection to wood, concrete or steel structures.

TENSION INDICATOR

Integrated tension indicating bottom bracket takes the guesswork out of installation.

CORROSION RESISTANT CONSTRUCTION

Galvanized and stainless steel construction stands up to harsh environments for maintenance free longevity.

SHOCK ABSORBING DESIGN

Integrated shock absorbing top bracket reduces forces imposed on ladder structure during a fall.

INTERMEDIATE CABLE GUIDES

Non-metallic cable guides prevent cable wear against the ladder and permits the climber to bypass without disconnecting.

PETZL JAG HAUL SYSTEM

Haul kit for pickoffs, making a releasable anchor, or tensioning a system, thanks to its 4:1 mechanical advantage and excellent efficiency (sheaves with sealed ball bearings). The collapsed kit is very compact, making usage possible even if the distance to the anchor is very short. The JAG SYSTEM haul kit is quick and easy to deploy: it is ready to use thanks to the flexible cover that prevents any risk of tangling. The haul end is color coded for instant identification.

ROCK EXOTICA AZTEK COMPACT SYSTEM

4:1 mechanical advantage, complete system with two Aztek pulleys, main rope (8 or 9mm), two Prusiks, a travel restrict Prusik and a compact bag to carry it all in for rapid deployment. Can be used for pick off, travel restrict, adjustable directional, high directional guylines, load release hitch, and much more.

P41 KIT - \$337.99

SUSPENSION TRAUMA 101

Prompt rescue is critical in the event of fall. In just minutes, suspension trauma can set in and cause serious, potentially fatal damage. It's caused when the leg straps of a harness put pressure on the femoral artery, which causes blood to pool in the legs. This can deprive the brain, kidneys, and other vital organs of oxygen. As the blood sits uncirculated, it becomes toxic and highly acidic. Once pressure is released, that large amount of stagnant blood can rush back to the heart quickly and cause cardiac arrest. Suspension trauma straps (See page 29) are a simple accessory to help relieve pressure off of the harness leg straps.

BLUEWATER MINI-HAUL KIT TACTICAL

4:1 mini-haul kit, includes multi-use technician bag with velcro belt type rear attachment, 35' tactical black 8mm NFPA BlueWater Escape rope, polyester sheath, nylon core, 6mm stainless steel quick link, 2 black double sheave mini pulleys, 1 with becket, 2 auto-lock Rock Exotica Pirate carabiners, 6mm x 11" hybrid sewn prusik.

YOU DON'T HAVE ALL DAY

That's why we designed our Chance® Series 90 Captstan Hoists to be one of the fastest and quietest in the industry, pulling 40 feet per minute at full load. An improved design features a multiple-planetary drive/backstop clutch assembled on the center shaft of a steel gearcase with full-length internal teeth. This design handles more rugged jobs, extends service life and reduces maintenance.

WESTFALL PRO

WESTFALL PRO LOAD LINE

The Westfall Pro Load Line is designed specifically for use with capstan hoists. This load line has a number of unique traits that set it apart from other double braid rope on the market.

Key Features: Unique sheath design gives it superior snag resistance and prevents particles and debris from penetrating the rope, extending the life and strength of the rope • Terminated ends for easy, versatile rigging options, no need for knots or termination plates which decrease rope strength • Protective sheath increases life of rope by protecting high-wear areas • High contrast tracers for increased rope visibility over other single color tracers • Improves perception of speed while lifting and lowering, seeing contrasting motion of orange and blue tracers makes it clear how fast rope is moving from hundreds of feet away

HARRINGTON LB MINI LEVER HOISTS

Harrington's LB lever hoists combine easy operation with a compact, low headroom design that easily handles real-world demands. Rated #1 selling lever hoist in the U.S., these hoists can be used horizontally, vertically, inverted, or at any other direction. Perfect for use in heavy-duty tower construction and maintenance, manufacturing, and day-to-day maintenance and repair. Rugged, all-steel construction; includes two brake pawls for additional reliability; moisture resistant brake pads; patented spring-loaded freewheel mechanism permits easy adjustment of the load chain and safeguards against accidental freewheeling under load; equipped with standard rubber grip for non-slip operation. Other capacities and lift heights available.

GLOVE RATINGS 101

Gloves are tested and rated in a few different ways. Next to many gloves you'll see a shield with four numbers. This is the EN388 shield. The EN388 standard is a great measurement of a glove's protection level. Use this guide to determine how your glove of choice stacks up in four important categories.

ABRASION – This is based on the number of cycles required to break down the glove. The protection is rated on a scale of 1 to 4. The higher the number, the better the glove.

CUT RESISTANCE – Based on the number of cycles required to cut through the glove. This scale is rated 1 to 5, with a Cut 5 glove providing the best protection.

TEAR – Rated 1 to 4 with 1 being the easiest to tear, and 4 being the most tear resistant.

PUNCTURE – Based on the amount of force required to pierce the material of the glove. 1 puncture easily, a 4 glove provides the most protection.

WELD METAL

Cadweld weld metal is a mixture of copper oxide and aluminum, packaged by size in plastic tubes. Each tube contains the starting powder at the bottom of the plastic tube, with the weld metal on top. These containers are packaged, with metal disks, in polyethylene boxes. The welding metal cannot ignite spontaneously. They can be handled and stored without danger and can be shipped with no special packaging or marking.

ERICO

ERICO is the pioneer of the CADWELD Exothermic Welding Process for permanent Cathodic Protection connections. Specifying the CADWELD process in your construction plans will dramatically extend the lifespan of infrastructure systems. CADWELD connections are made with a semi-permanent graphite mold, which holds the conductors to be welded. Weld metal (a mixture of copper oxide and aluminum) is dumped into the top of the mold. The mold is covered and the weld metal ignited. The exothermic reaction produces molten copper, which results in a permanent, high conductivity connection. A CADWELD Connection has current carrying capacity equal to that of the conductor, is permanent with a low resistance connection that cannot loosen or corrode, uses lightweight, inexpensive equipment, requires no external source of power or heat, and can be easily checked for quality.

MOLD SEALER

Ideal for sealing hot or cold molds to retard leakage.

T403 - \$19.99

ELECTRONIC IGNITER

Initiates the reaction of the metal crucible, includes a 6" lead that attaches to the ignition strip and 8 AA batteries.

PLUSCU - \$133.99

COLD GALV 101

WHAT IS COLD GALVANIZING COMPOUND?

Cold galvanizing compound is a single-component zinc coating used to protect bare steel from rust and corrosion. Although it is applied like paint, it is not. It gives the same protection as hot dip galvanizing.

HOW DOES COLD GALVANIZING WORK?

Cold galvanizing compound acts as an active coupling to the steel parent metal to form an electrolytic bond. In the presence of an electrolyte (moisture), zinc dust in cold galv will sacrifice itself to protect the steel.

WHAT SURFACE PREPERATION IS REQUIRED BEFORE APPLYING COLD GALV COMPOUND?

The surface must be clean, dry steel. Use a steel brush to remove any existing rust on the surface for the entire area that will be covered in cold galvanizing compound. Also, remove any chemicals, dirt, grease, oil, silicon, etc. from the surface before applying cold galv.

HOW DO I APPLY COLD GALVANIZING COMPOUND?

Cold galv can be painted on using traditional brushes, rolled, and even sprayed using a thinner. Aerosol coatings are also available. We recommend a disposable brush like the 3" chip brush.

WHAT DO THE DIFFERENT PERCENTAGES OF ZINC CONTENT OFFER?

The higher the zinc content, the higher protection against the elements from rust and corrosion. The zinc bonds to the steel to form the protective layer, and the higher the zinc content, the better the coverage and protection.

IF IT'S VERY COLD OR VERY HUMID, CAN I STILL APPLY COLD GALV?

Most likely. Be sure to review the conditions for your particular brand of cold galv, but most of the compounds can be applied in a wide variety of weather conditions. Humidity can even intensify the cathodic action and acceleration of the protective formation.

CAN COLD GALVANIZING COMPOUND BE SHIPPED NEXT DAY AIR?

Unfortunately not. Cold galvanizing compound can only be sent via ground or LTL. It is not allowed in the air system due to its category 3 classification for flammable liquids.

MULTIWAVE SMARTALIGN SMART ALIGNER SYSTEM

The Multiwave Smart Aligner System is a GPS-based compass designed to effectively and efficiently align your antennas in real time. The Smart Aligner solution is designed for ease of use and unparalleled accuracy that provides a True North or Grid North azimuth measurement, Tilt, Roll and Position. Once the system is mounted to the antenna, it is simply turned on. From there the user interface is the full feature app on any iOS and Android smart device. Reporting is as simple as a few clicks with the report being able to be emailed directly from the app. The system has been tested in the harshest RF live antenna environment while still maintaining it's accuracy. The Smart Aligner solution is accurate, fast and scalable creating an effective solution for all your alignment needs. First foldable GPS antenna alignment tool; universal mounting bracket; multiple antenna mounting configurations for the most demanding spatial and RF conditions; tool and bracket fit into ruggedized case; carry on baggage acceptable size; includes backpack to carry the tool and bracket; weighs only 10 lbs; free smartphone app.

SUNSIGHT ANTENNALIGN ALIGNMENT TOOL

The AntennAlign Alignment Tool is used during equipment installation or antenna position audits. The AAT features a quick capture feature for on site captures if antenna position data not available prior to climb. Get antenna installs right the first time, eliminate costly site re-visits or re-climbs. Durable, weatherproof and rugged for tough conditions. Simple to operate and can mount to any antenna locations. In seconds, a person can take a reading from any WiFi enabled device, instantly creating a permanent record of an antenna alignment for accountability and traceability. Desired equipment position can be input prior to climb or entered into the tool on-site. The report records the final alignment specification, including latitude/longitude, azimuth, tilt, height, and current date/time, and also indicates its height above ground level.

AAT-30 - \$6,999.00

SUNSIGHT AIR ANTENNA MOUNT

10lbs, 1.7" height, 3.8" width, 20" length. For use in conjunction with the AAT-30 or AAT-15 to Align Ericsson Air Antenna models, the Air11, Air21, or Air32. Required by Ericsson mandate for alignment of Air21 or 32 antennas when using Sunsight Alignment Tool.

SI-2100 - \$349.00

3 STEP EQUIPMENT FINANCING

1

Pay Advance Finance Payment

Pay 20% of the equipment cost as a down-payment. This is the first month's finance payment.
Example: \$5000 equipment cost = \$1000 (down-payment)

2

Calculate the Monthly Payment

Subtract the down-payment from the equipment cost. Then divide this by the 11 remaining months.
Example: \$5000 equipment cost = \$1000 (down-payment) = \$4000/11 = \$363.64/month for 11 months.

3

Buy Out for \$1.00

You will own the equipment at the end of the finance term for \$1.

Call or visit gmesupply.com for more info. \$75 application processing fee may apply. Financing only available for antenna aligners.
