

PMI's classic EZ-Bend 16 carrier construction combined with the toughest nylon on the market makes PMI ropes some of the toughest in the world. PMI ropes will always beat 32, 40, and 48 carrier designs made with lesser quality nylons hands down in abrasion and real-world durability tests. Although all diameters of PMI Classic rope are 16 carrier sheath design, the denier (thickness) of each diameter's sheath is different. It is carefully designed to provide the maximum abrasion resistance, "grab" the core to minimize sheath slippage, and provide the desired hand for the intended applications.
